EDUCATION

University at Buffalo (SUNY Buffalo)

MS in Computer Science (AI/ML) *GPA: 3.7/4.0*

Buffalo, NY

Aug 2025 - Dec 2026

Sant Longowal Institute of Engineering and Technology (SLIET)

Bachelor of Engineering in Computer Science *GPA: 9.18/10*

Punjab, India

Aug 2017 - June 2021

SKILLS

Languages:	Python, Java, Javascript, Typescript
Backend/Cloud/DB:	Node.js, FastAPI, PostgreSQL, SQL, DynamoDB, AWS RDS, Docker
AI/ML:	PyTorch, TensorFlow, LangChain, Scikit-Learn, Agentic AI, RAG
Frontend:	React, Tailwind, React Native
Soft skills:	Strong verbal communication, Team leadership, Public speaking, Self-motivated

EXPERIENCE

Ford Motor Company

Software Engineer

Chennai, India

Sep 2021 - Aug 2025

- Spearheaded the development of containerized automation workflows using Docker, reducing manual operational overhead by 40% and optimizing data ingestion speeds across distributed systems
- Designed and implemented scalable end-to-end data pipelines using PostgreSQL and AWS RDS to ingest and normalize millions of daily records from diverse, unstructured data sources
- Engineered AI/ML models (classification, clustering, NLP) to automate anomaly detection and pattern recognition, resulting in a 25% improvement in system detection accuracy
- Built scalable backend integrations connecting enterprise platforms through REST APIs, processing 500+ automated workflows monthly
- Architected and deployed enterprise-level full-stack web applications using Node.js, Express, and React, providing real-time data visualization and operational dashboards for high-stakes decision-making
- Developed custom integration services to bridge disparate enterprise platforms, automating data enrichment through RESTful APIs and cloud-native AWS infrastructure
- Directed the technical roadmap for internal tooling initiatives, translating complex security requirements into scalable software architectures while managing stakeholder expectations
- Collaborated in agile cross-functional teams with developers, analysts, and stakeholders to design scalable software solutions and review production code changes

PROJECTS

Agentic Technical Documentation Assistant *Ollama, LangChain, ChromaDB, Streamlit*

Built a privacy-preserving local agentic RAG assistant to query hardware API/SDK manuals without using external AI APIs. Added planner-based tool routing, source citation validation, refusal guardrails, structured responses, and observability metrics for latency, retrieval quality, and failure analysis.

Real-Time Metrics Aggregator *Python, Docker, Redis*

Designed a distributed event-processing pipeline using Python, Redis, and Docker to ingest and aggregate high-volume real-time metrics with low-latency performance

Multimodal Machine Translation *Whisper (OpenAI), Python, PyTorch, Gradio*

<https://github.com/vsazzy>

Designed and implemented a multilingual, multimodal machine translation system capable of converting spoken audio input into translated text across multiple languages

CERTIFICATIONS AND ACHIEVEMENTS

Coursera - How Google does Machine Learning

A certification course on covering Google's approach to applying machine learning in products and strategies for scaling ML solutions at enterprise level

Linkedin Learning: Creating and Hosting a Full-Stack Site

A certification course focused on building web applications from scratch and deploying them to production environments

Scored 5000th rank all over the world in Google Hash Code
